## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2, 6-8, are rejected under 35 U.S.C. 102(b) as being anticipated by Garfinkel et al.

Regarding claim 1, Garfinkel et al., discloses a method for specifying accelerated thermal cycling tests for electronic solder joint durability with features of the claimed invention including the steps of initiating a crack (col. 7, line 11), and considering it associated time (col. 7 lines 56-59), along with the electronic module using numerical simulation techniques such as finite element analysis to estimates the time to failure of all of the solder joints (col. 5, lines 31-36).

Regarding claim 2, the reference uses the Coffin-Mason law for prediction of the fatigue life (col. 2, line 36)

Regarding claim 6, Garfinkle uses thermal stress (see, for example, claim 1).

Regarding claim 7, Garfinkle suggests the calculation of nominal and shear stress and strain (col. 2, line 22).

Regarding claim 8, Garfinkle teaches testing at high temperature (col. 6, line 58).

Art Unit: 2855

3. Claims 3-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
